2010 Plant Industries – Feed Laboratory Activities

The Plant Industries laboratory analyzes samples to ensure the quality and safety of animal feed, in addition to ensuring that the product complies with the label guarantees. The lab routinely assays for guaranteed values of protein, non-protein nitrogen (urea), fat, fiber, ash, moisture, vitamin A, fourteen minerals and seven medications. The seven medications that are routinely tested include: Amprolium, Chlortetracycline, Decoquinatate, Lasalocid, Monensin, Oxytetracycline, and Sulfamethazine. The lab has the capability to test for Zoalene, Carbadox, and Sulfathiazole upon request, and the lab is currently reviewing equipment and method availability to test for Tylosin and other medications. Additionally, samples are outsourced to other laboratories when a desired test is beyond our capability.

Samples are also screened for three mycotoxins, eight heavy metals and ruminant protein. Microscopy exams are conducted for ruminant protein and viable noxious weed seeds.

During 2010, a total of 1,127 samples of feeds or feed ingredients were received. These samples required 3864 test procedures. Note that some of these procedures test for multiple analytes and the numbers do not include repeated tests to confirm a violation.

A total of 401 samples were declared in violation. Of the 401 violations, 182 were serious enough to warrant a stop-sale order.

Aflatoxin screens were conducted on 63 samples comprised of corn, cottonseed, dried distiller's grain, and finished feed products. The 39 dried distiller's grain, corn, or corn-based products were also tested for fumonisin. In addition, seven of these samples were screened for vomitoxin. No samples exceeded the established limits for mycotoxins in 2010.

Nine samples were submitted and screened for ruminant protein. No prohibited ingredients were found.

Heavy metals screens were conducted on 10 feed samples and mineral premixes. No excessive heavy metals were detected.

Thirty samples were found to contain viable noxious weed seeds.

The following tables are summaries of analysis results. Table 1 displays results for 2010 laboratory samples sorted by analyte showing testing, analytical variance (AV) and violations. The analytical variance accounts for an amount of inconsistency of feed formulation, as well as the inherent variability of analysis. These values are expressed as either a percentage of the guarantee or a formula based on the amount of the guaranteed nutrient. If the AV is formula based, an X represents the guarantee. A test result that is deficient/in excess of more than one AV is a violation. A result that is greater than two times the AV is a major violation and a stop sale will be issued. The AV for most analyses is set by AAFCO. Drug, antibiotic, and mycotoxin limits are determined by FDA guidelines. Any analysis result outside of these guidelines will result in a stop sale. Table 2 exhibits data on the number of samples, tests performed, violations, and stop sale orders issued over the last five years. This data is also displayed in Chart 1.

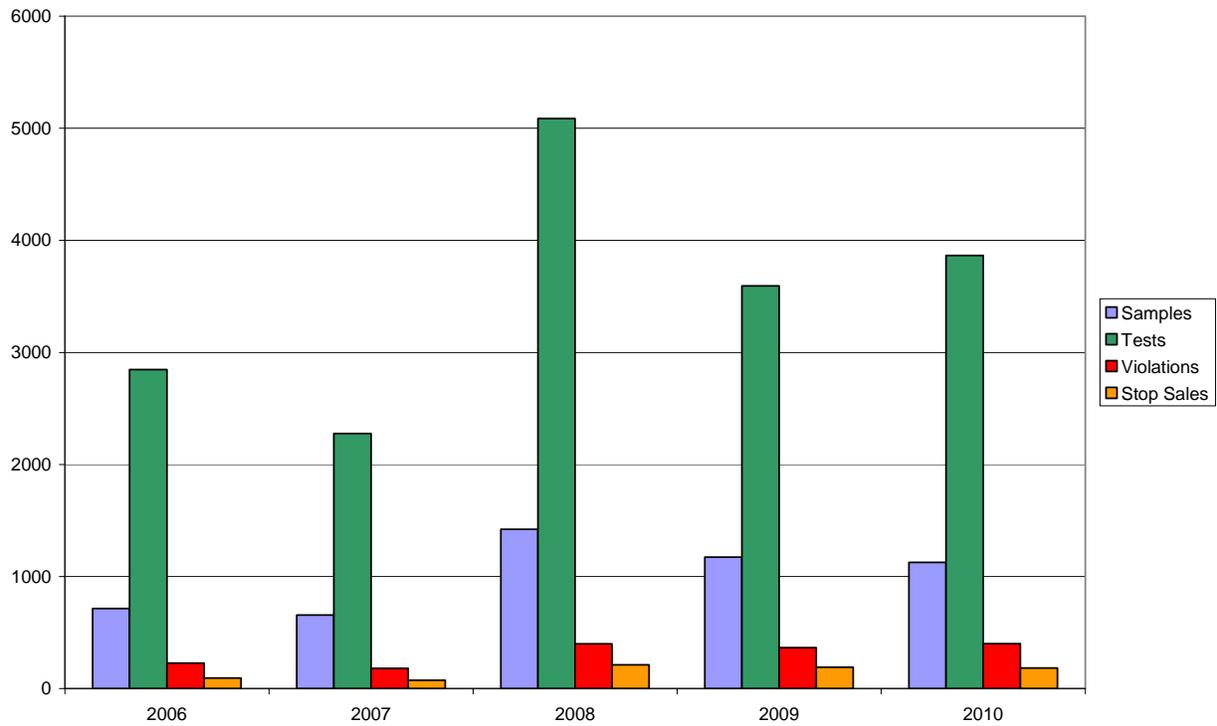

Table 1: Feed Analysis Result Summary

Analyte	Tests performed	AV	Violations (>1 AV)
Protein	982	(20/X) + 2	170
NPN	5	(80/X) + 3	1
Fat	681	10%	70
Fiber	46	(30/X) + 6	3
Ash	39	(45/X) + 3	6
Moisture	84	12%	0
Calcium	393	15%	44
Phosphorus	398	(3/X) + 8	18
Salt	185	(15/X) + 9	20
Cobalt	16	25%	0
Copper	108	25%	5
Iron	47	25%	4
Magnesium	70	15%	2
Manganese	58	25%	2
Potassium	49	15%	4
Selenium	4	15%	0
Zinc	161	25%	6
Heavy Metals	10	5 ppm	0
Amprolium	7	80-120%	1
Chlortetracycline	22	70-130%	0
Lasalocid	17	75-125%	1
Monensin	12	75-125%	0
Oxytetracycline	8	65-135%	0
Sulfamethazine	0	80-120%	0
Vitamin A	136	< 30% or > 500%	14
Aflatoxin	63	< 20 ppb	0
Fumonisin	39	< 5 ppm	0
Vomitoxin	7	< 5 ppm	0
Ruminant Protein	9	any positive	0
Microscopy	134	viable noxious weed seed	30

Caution – Do not formulate to the permitted Analytical Variance (AV). The permitted AV is not a tolerance or formulation limit. The permitted AV is an allowable and expected variance in laboratory analytical results. An analyte is deficient if found to be at 9.9% when it is guaranteed at 10.0%. At 9.9% however, the deficiency is not at a level at which an action will be taken. Action will be taken when the permitted AV is exceeded as stated above.

Table 2: Five Year Lab Data				
Year	Samples	Tests	Violations	Stop Sales
2006	714	2848	228	94
2007	656	2275	180	74
2008	1421	5088	398	212
2009	1173	3595	366	191
2010	1127	3864	401	182

Chart 1: Five Year Lab Analysis Data

MYCOTOXINS AND ANIMAL FEEDS

Mycotoxins are harmful substances produced by various fungi under specific conditions. The presence of mold is not a reliable indicator of toxins, nor is the absence of visible mold an indicator of the lack of toxins.

Types of Toxins

AFLATOXINS

- Measured in parts per billion (ppb)
- Produced by strains of *Aspergillus flavus* and *Aspergillus parasiticus*
- Toxic and carcinogenic
- There are four types: B1, B2, G1 and G2; B1 is the most prevalent and the most toxic
- Aflatoxins M1 and M2 may appear in the milk of dairy animals that have consumed aflatoxin contaminated feed or grain
- Crops most affected are: corn, peanuts, cotton (cottonseed), coconut and tree nuts
- Wide range of symptoms include: immune system may weaken and reproductive systems may be affected
- Long-term, low-level exposure has been correlated to cancer
- Sensitivity varies among species
- The liver is a primary target

FUMONISIN

- Measured in parts per million (ppm)
- Produced by strains of *Fusarium moniliforme*, a fungus commonly found in corn
- There are three types: B1, B2 and B3; B1 is the most common
- Fumonisin is the cause of equine leukoencephalomania (ELEM) and porcine pulmonary edema syndrome

VOMITOXIN (DON or deoxynivalenol):

- Measured in parts per million (ppm)
- Produced by several fungi, especially *Fusarium graminearum*
- Mostly found on cereal commodities: wheat, corn, barley and ensilages
- Symptoms include: vomiting, feed refusal, gastroenteritis, diarrhea, immune suppression and blood disorders
- Pigs are especially sensitive, and dogs may be as well

State Requirements

State law requires that any load of cottonseed or cottonseed seed products destined for Idaho be accompanied by a "Certificate of Analysis" certifying the aflatoxin level in the shipment to 20 parts per billion (ppb) or less, if being fed to dairy cattle. Several incidents of cottonseed shipments exceeding this tolerance have been recorded in Idaho. Cottonseed and cottonseed meal may be imported into Idaho certified at aflatoxin levels of up to 300 parts per billion (ppb) to be fed to finishing beef cattle under a special permit from the Idaho State Department of Agriculture.

Management Practices

Piles of cottonseed can develop "hot spots" of aflatoxin levels when left in piles or railcars too long, or when left in transit too long. Cottonseed that may have been certified at only a few parts per billion (ppb) initially may grow to unsafe levels under certain environmental conditions. Cottonseed initially certified at 15-20 parts per billion (ppb) may exceed safe levels by delivery.

- Obtain shipments that are as fresh as possible to avoid or reduce risk
- Ask for a copy of the "Certificate of Analysis" when making purchases
- Store cottonseed and cottonseed seed products out of the weather, if at all possible
- Utilize piles of cottonseed and cottonseed seed products in a timely manner
- Retest questionable feed

Laboratory Tests

Lab tests utilize the ELISA method. The Plant Industries lab tests include:

Aflatoxin

- Cottonseed and corn
- Lower limit ~5 parts per billion(ppb)

Fumonisin

- Corn
- Lower limit 1 part per million(ppm)

Vomitoxin

- Wheat , Distiller's Grain
- Lower limit 1 part per million(ppm)

Feeding Guidelines

AFLATOXINS

The FDA has established regulatory guidance levels in animal feed ingredients for aflatoxin in Compliance Policy Guide 7126.33. These levels apply to total aflatoxin—measured in parts per billion.

Animal Feeds _____ 20 ppb
(not corn, peanut products or cottonseed meal)

Corn and peanut products:

Immature animals and poultry _____ 20 ppb
Dairy animals _____ 20 ppb
Breeding cattle and swine _____ 100 ppb
Mature poultry _____ 100 ppb
Finishing swine over 100 lbs. _____ 200 ppb
Finishing beef cattle _____ 300 ppb

Cottonseed Meal

Beef cattle, swine or poultry _____ 300 ppb

FUMONISIN

The American Association of Veterinary Laboratory Diagnosticians Mycotoxin Committee suggested in 1993 that the following guidelines for feeding fumonisin contaminated corn be observed—measured in parts per million.

Horses _____ <5 ppm

Non-roughage portion of diet and do not feed corn screenings

Swine _____ <10 ppm

Total ration

Poultry _____ <50 ppm

Total ration

Beef Cattle _____ <50 ppm

Non-roughage portion of ration

Dairy Cattle: INSUFFICIENT DATA FOR RECOMMENDATION.

VOMITOXIN

In September 1993, the FDA suggested the following guidelines—measured in parts per million:

Ruminating beef and feedlot cattle older than 4 months _____ 10 ppm

Grain and grain by-products not to exceed 50% of the diet

Chickens _____ 10 ppm

Grain and grain by-products not to exceed 50% of the diet

Swine _____ 5 ppm

Grain and grain by-products not to exceed 20% of the diet

All other animals _____ 5 ppm

Grain and grain by-products not to exceed 40% of the diet
