## Sweet Corn – Fall Applications

---

Dual II Magnum may be applied in the fall preceding sweet corn planting for control or suppression of yellow nutsedge. Dual II Magnum will not control emerged weeds, therefore, emerged weeds must be controlled by other methods such as tillage. Emerged weeds can also be controlled by tank mixing a labeled burndown herbicide with Dual II Magnum at the time of application.

Apply Dual II Magnum in the fall after the harvest of the previous crop but before freeze-up. On *coarse soils*, apply 1.0-1.33 pts./A of Dual Magnum if organic matter content is less than 3%, or 1.33 pts./A if organic matter content is 3% or greater. On *medium soils*, apply 1.33-1.67 pts./A of Dual Magnum. On *fine soils*, apply 1.33-1.67 pts./A of Dual Magnum if organic matter content is less than 3%, or 1.67-2.0 pts./A if organic matter content is 3% or greater.

Ground may be tilled before or after application but do not exceed a 2 to 3-inch incorporation depth if tilled after Dual II Magnum application.

**Note:** (1) Do not apply more than the labeled application rate for a given soil texture per year or illegal residues may result. (2) If a spring application of Dual II Magnum is made, the total rate of the fall plus spring applications must not exceed 3.9 pts./A, depending on soil texture. (3) Follow all precautions and restrictions on the Dual II Magnum federal label.
